Pressure:	178 PSI
Discharge Head:	350 feet vertical
Suction Lift:	29 feet vertical
Power Required:	3-7 HP
Dimensions:	34"L x 24"W x 46"H
Weight:	275 lbs

Patented Technology Inside Every Pump

The SaniSailor Sentinel EV405 is designed to be used as a high vacuum, high discharge pumpout system. This system is for installations requiring lift of up to 350 feet or up to thousands of feet horizontally. The Sentinel EV405 is more than a lift station. With the capability of high vacuum and high lift at high flow rates, the SaniSailor EV405 eliminates the need for a separate lift station.

The Sentinel EV405 can be used as a vacuum system or as a dockside pump station. The Sentinel EV405 develops an absolute vacuum which enables it to pump out boats located hundreds of feet from the pump-out system.

- 12%-120% longer hose life than compared to other brands
- Best value - lowest life cost average
- Best warranty in the industry, 3 years
- Advanced patented technology in every pump
